(54) HEADGEAR

(57) Headgear (26) for securing a respiratory mask (12) to a patient incorporates a quick release arrangement. The headgear has at least one strap (22,24) extending from each side of the mask, the straps being releasably fastened rearwards of the patient's face to secure the mask. The headgear further includes release means in the form of a pull cord (41) attached to an overlying strap (22) at its region of fastening to the underlying strap (24) and guided forward to be gripped at the front of patient. Pulling forward on the pull (41) of the cord (41) separates the fastening (28) between the straps (22,24) and pulls the mask away from the patient's face.

The embodiments of the invention in which an exclusive property or privilege is claimed are defined as follows:

1. Respiratory mask-securing headgear for securing to the face of a wearer a
5 respiratory mask having a first side and an opposite second side, the headgear
including at least one strap extending from each of the first and second sides of the
mask, the straps in use being releasably fastened at a region rearwards of the facial
region of the wearer by fastening means so as to secure the mask, the headgear further
including release means acting on the fastening means and in use extending forward
10 of the fastening means such that the release means may be gripped from substantially
the front of the wearer and actuated to release the fastening means and thereby allow
removal of the headgear from the wearer.
2. Respiratory mask-securing headgear according to claim 1 wherein the
15 fastening means is located in use at the rear of the wearer's head.
3. Respiratory mask-securing headgear according to claim 1 wherein the
fastening means includes a hook fastener attached to one of said straps.
- 20 4. Respiratory mask-securing headgear according to claim 3 wherein the hook
fastener releasably fastens to a covering of said other strap.
5. Respiratory mask-securing headgear according to claim 1 wherein one of said
straps overlies the other of said straps at said fastening means, wherein said release
25 means is attached to said overlying strap at said fastening means and acts to pull said
overlying strap away from said other strap to release the fastening means.
6. Respiratory mask-securing headgear according to claim 5 wherein said
fastening means includes a hook fastener on an inner surface of said overlying strap.

7

BEST AVAILABLE COPY

7. Respiratory mask-securing headgear according to claim 6 wherein said release means is a release cord attached at one end thereof to said inner surface of the overlying strap.
- 5 8. Respiratory mask-securing headgear according to claim 7 wherein said release means is attached at an upper portion of said inner surface.
9. Respiratory mask-securing headgear according to claim 7 wherein the overlying strap has one or more guides through which the release cord passes, such
10 that a distal end of the release cord is located at the front of the wearer and may be pulled to actuate release of the fastening means.
10. Respiratory mask-securing headgear according to claim 9 wherein a force acting on the headgear due to pulling of the cord acts to retain said other strap against
15 the wearer's head whilst pulling away the overlying strap.
11. Respiratory mask-securing headgear according to claim 10 wherein further pulling of the cord in substantially the same direction acts to remove the headgear and mask from the wearer.
- 20 12. Respiratory mask-securing headgear according to claim 10 the fastening means is located in use at the rear of the wearer's head.
13. Respiratory mask-securing headgear according to claim 1 when used to secure
25 a respiratory mask to a patient, said mask being a part of a patient gas delivery for treatment of a respiratory disease.
14. A combination according to claim 13 wherein said respiratory disease is Obstructive Sleep Apnea.

ABSTRACT:

Headgear {20} for securing a respiratory mask (12) to a patient incorporates a quick release arrangement. The headgear has at least one strap (22,24) extending from each side of the mask, the straps being releasably fastened rearwards of the patient's face to secure the mask. The headgear further includes release means in the form of a pull cord (41) attached to an overlying strap (22) at its region of fastening to the underlying strap (24) and guided forward

to be gripped at the front of patient. Pulling forward on the pull tab (45) of the cord (41) separates the fastening (28) between the straps (22,24) and pulls the mask away from the patient's face.
